

ABSTRACT

To provide a speaker cable plug which is high in performance and easy to use, a speaker terminal for connection to such plug, and a speaker terminal system using such plug and terminal as a set. A plug main body 1 which is internally hollow and formed with a terminal insertion port 2 for positive and negative electrodes in the front surface, and in the rear surface with a cable insertion port 3 corresponding to both electrodes, and which internally has terminal holding tongue pieces 5a, 5b for holding the speaker terminal inserted through the terminal insertion port 2 from both sides of the speaker terminal by springiness, and cable holding tongue pieces 6a, 6b connected to the terminal holding tongue pieces 5a, 5b for holding the lead wires of the speaker cable for positive and negative electrodes inserted through the cable insertion port 3 from both sides the lead wires by springiness, wherein an operating piece 7 for expanding the cable holding parts of the cable holding tongue pieces 6a, 6b for both electrodes is formed so that each cable holding part can be expanded by a separate operating piece 7.
